PROCESS DOCUMENTS · FICTIONAL PRACTICE

Reframe Orthopedics: process documents

The brief, sitemap, homepage outline and keyword map behind the Reframe Orthopedics website. Reframe Orthopedics is a fictional practice; the documents are the real working method.

---

1 · Content brief

Client: Reframe Orthopedics (fictional): orthopedics and physical therapy practice

Problem: A long specialty list makes the patient do the routing work, so therapy referrals and existing plans get pushed through the new-patient funnel.

Audience

- Adults with a joint or movement concern deciding whether to see an orthopedic specialist.
- Patients with a therapy referral or an existing rehabilitation plan who need the physical therapy route, not a new consultation.
- People who have discussed surgery and want to understand the options, logistics and recovery handoff.

Goals

- Give a first orthopedic consultation and an existing physical therapy plan separate entry points.
- Make referral, records and imaging requirements clear before a request.
- Keep the whole recovery in view: specialist, therapy and follow-up owners connect without any promise of a particular outcome.
- Carry each social post into a relevant guide, care page and the sample visit planner.

Voice

RULE	DO	DON'T
Start with the activity, not the anatomy	"A painful shoulder. A knee that slows the stairs."	"Advanced orthopedic solutions for every lifestyle."
Never promise a recovery outcome or timeline	"Ask how the plan will be set, reviewed and adjusted."	"Pain-free in six weeks."
Route by the visitor's situation	"I'm arranging physical therapy"	"Book now."
Treat a consultation as a conversation, not a commitment	"A consultation is a place to understand the options and ask questions."	"Get your surgery scheduled fast."

Questions the site must answer

1. Should I request a specialist consultation, physical therapy or an injury visit?
2. Do I need a referral or new imaging first?
3. What happens at the first orthopedic appointment?

Constraints

- Fictional brand: an original concept with no operating practice, staff, appointments or prices. OrthoVirginia was a public research reference, not a client, and no affiliation is implied.

4. How many therapy visits will I need, and how is the plan reviewed?
5. Is a consultation a commitment to surgery?
6. Can every injury be seen here?
7. Who coordinates the next step if therapy or a procedure is recommended?

- No outcome claims: no results, recovery times, “best” or guaranteed language. Pages say what a visit may involve and what to ask, never what care will achieve.
- No patient data online: the planner runs on fictional presets and collects no names, symptoms, photos or uploads. Sensitive care interests never go to analytics labels, URLs or advertising audiences.
- No invented operating facts: clinicians, credentials, fees, accepted plans, hours and availability are left for the real practice to supply. Where the copy needs one, it says “confirm with the practice”.
- Accessibility: target WCAG 2.1 AA (text contrast, keyboard-operable menu and planner, descriptive alt text, a skip link and plain-language headings). Prototype checks are not a certification.
- No exercise instruction or return-to-activity advice in social content; videos show the administrative route, not treatment.

Success measures PROPOSED

- Proposed, not measured: referral completeness at receipt (share arriving with the requested records), once operational definitions exist.
- Proposed, not measured: manual rerouting between the consultation and therapy routes, counted by the referral coordinator.
- Proposed, not measured: time from referral receipt to review, reported in aggregate after a real launch.

Deliverables

- 24-page website: homepage, care overview, four care pages (Orthopedic consultation, Physical therapy, Injury visits, Surgical planning), three guide pages, guides & offers, costs & coverage, people & approach, a locations overview and two location-concept pages (The Movement Center and Westside Studio), sample visit planner, proposed care handoffs, social campaign hub, four social profile previews, about this concept and demo privacy
- Four social profile previews: Instagram, Facebook, LinkedIn and TikTok (local mockups, no live accounts or engagement counts)
- Three ungated, downloadable guides: “What do you want to get back to?” (First-visit planner); “Your first therapy visit, unpacked.” (Rehab preparation pack); “Help the next team pick up the thread.” (Referral handoff guide)
- Four-step sample visit planner using fictional presets, ending in a “next step has an owner” handoff summary
- Proposed care-handoff page with a six-stage workflow from visit reason to billing
- Portfolio case study with the evidence trail: decision, test, hypothesis, proposed metric and handoff rule
- Flagship article: “Do I need a referral for physical therapy or an orthopedic doctor?”

#	SECTION	ITS JOB	WHAT'S IN IT
1	**Hero: Start with what you want back.**	Lead with the life goal, not the injury, in calm hospitality-grade photography.	Full-bleed photo of Dana Whitfield (illustrative model) on a morning trail, the headline bottom-left, Book a first visit and Call, and three plain facts.
2	**Where does it hurt?**	Let a patient pick a body area and a starting point and see the usual first step, so referrals arrive in the right queue.	The signature body-area picker: six areas, four starting points, the usual first step, the referral question and what to bring.
3	**How a first visit works**	Take the fear out of the first appointment.	Three photo cards: Talk (the consult room), Examine (hands on a knee), Plan (shoulder rehab with a band).
4	**Reframe in four facts**	Give scale without invented outcomes.	Six body areas, four ways into care, two places with one plan, three free checklists.

#	SECTION	ITS JOB	WHAT'S IN IT
5	**The people you'll meet**	Show the four roles a visit passes through without naming anyone.	Four matching grey-backdrop portraits of illustrative models: specialist, physical therapist, referral coordinator, front desk and billing.
6	**Physical therapy: Rehab planned around what you want back**	Sell therapy as part of the same plan, not an afterthought.	Supported-squat photo, the four-stage path (Consult, Plan, Therapy, Check-in).
7	**Locations: Two places, one plan**	Make the two sites and what each offers clear.	The Movement Center at dusk and the Westside Studio entrance, sample addresses, parking and step-free notes.
8	**Before you arrive: Cost and your first visit**	Name the orthopedic billing surprises (imaging, braces, therapy visit limits) up front.	Three plan questions, what to bring, link to who bills what.
9	**For clinicians: Referring a patient?**	Give referring offices one clear route, so referrals arrive complete.	What to send, where it goes, who confirms.
10	**Free checklists**	Offer the three guides the social posts point to.	First-visit planner, rehab preparation pack and referral-ready checklist, each with download.
11	**Questions: What people ask first**	Answer referral, imaging and cost questions before a call.	FAQ with a link to the referral article.
12	**Closing: Start with what you want back.**	End on the goal and one action.	Couple gardening at a raised bed, Book a first visit and Call.
